

Comments on *Alliaria petiolata* ESA

COMPILED BY
WILDLAND INVASIVE SPECIES PROGRAM

10 March 2001: Staff from the Oregon office of The Nature Conservancy wanted to add a note about *Alliaria petiolata* control:

1)It will re-flower after being brushed back,

2)It can flower and fruit more than once per season.

The best management is to pull it out of the ground in early spring.
